

What is Ingeo™ Fiber and its Benefits?

Ingeo™ is the first man-made fiber derived from corn. Ingeo is created using natural resources and new technology to create soft fibers. Ingeo can be found in bedding, clothing, baby products, food products, cosmetics, and packaging! Ingeo makes an excellent filling for a crib pad not only because of its natural roots but also because of its soft and luxurious feel. Ingeo fibers have a high quality loft like down, but there are no feathers, so there are no worries about allergies!

Ingeo is also very durable and easy to care for, making it an excellent option for use in a crib mattress pad. It is machine washable and dryable and will not lose its loft. The fiber also offers improved moisture and liquid wicking when compared to other fibers. Liquids are transferred away from baby's body and absorbed into the cotton layers of the pad.

Corn is Sustainable

Corn is the United States' most valuable and widely available crop. It is also the country's most exported crop. Corn is a 100% annually renewable resource. Each year farmers continue to plant corn to meet increasing demand, not only for human consumption or livestock feed, but also for new technologies like ethanol and sustainable plastics. By using naturally derived fuels from corn to produce fibers, we can use less synthetic fibers, which are petroleum-based.
